

COLLECT® Advanced Fulfillment

If you ship hundreds of orders per day or dozens of truck loads per day MSC's Advanced Fulfillment was designed to make your shipping processes efficient and most importantly, accurate.

- COLLECT's batch picking and pack out solutions enable customers to ship several hundreds or even thousands of orders per day by making the pick and pack processes efficient.
- License plating or LPN for users with lot or serial controlled items reduces transaction volume.
- Integration to carrier systems such as UPS, FedEx, and USPS during the pack out process eliminates manual entry of information into these systems, further simplifying the shipping process.
- If your shipping is large order, LTL or truck load oriented COLLECT's Pick& Pack mode of shipment preparation will address your needs, and trucks can be shipped with a single transaction. Direct integration to your chosen carriers is available as well.
- COLLECT® provides all shipping documents, invoice, pro-forma, pack-slip, NAFTA, Certificate of Origin and Hazmat.
 - COLLECT® Advanced Fulfillment can be implemented as an individual module, or in conjunction with a suite of modules available in COLLECT® Shop Floor Data Collection configuration, or as part of the COLLECT® Warehouse Management System.
